Environment Day 2022

Venue: Institute of Management Studies, DAVV Indore

Dates: 5th June 2022

Participants: Faculty, Staff and Students of IMS

A program was organized on the occasion of World Environment Day by the students of Environmental Consciousness Club and MBA HR at Devi Ahilya Vishwavidyalaya. The theme of the program was "Only one Planet" and the program was attended by Director Professor Ashok Sharma as the Chief Guest, Dr. Anil Sharma as the Special Guest and Shri Gopal Jagtap, the Guest of Honor.

Director Sangeeta Jain Ma'am started the program and advised everyone to carry steel glasses with them so that we can reduce the use of paper cups and plastic bottles and keep our environment clean and safe. World Environment Day is specially celebrated to consider the issues related to the environment and to solve the problems related to the environment and on this festival the professors and students of Devi Ahilya together discussed the ways to save our nature.

After being declared in the year 1972, it was celebrated every year from 1973 on 5th June by the United Nations General Assembly with the aim of giving information about the condition of environmental degradation and to make people understand the importance of clean environment and to increase global awareness about it. Going ahead, Gopal sir told the students

about solid waste management, he discussed about different ways by which we can keep our city clean.

The same Ashok Sharma sir talked about how our carelessness is harming the environment, he told about green house gases and how today's generation can earn money from it. We need to take effective steps to reduce the rate of climate change and save many natural resources for better life on earth in future. It is necessary that we pay attention to less use, reuse and recycle so that we can be successful in controlling the deteriorating condition of the natural ecosystem.

We need to take small but many steps like consuming organic foods instead of inorganic foods, using natural fertilizers instead of chemical fertilizers, reducing the use of electricity, recycling things, stopping deforestation. Effective steps have to be taken related to protection of wild animals etc. Our positive steps will prove to be helpful in solving the environmental related issues in the near future.

There is only one earth, one environment and one life, so live it, don't waste it.
